

## Biodiversity Challenge Funds Projects Darwin Initiative, Illegal Wildlife Trade Challenge Fund, and Darwin Plus Half Year Report

Project reference		DARNV019		
Project title		Women-led School-based Agroforestry in Benin (WSAB)		
		Project		
Country(ies)/territe	ory(ies)	Benin		
Lead Organisation	า	JSI Research & Training Institute, Inc.'s World Education		
		Division (JSI/WorldEd)		
Partner(s)		Alafia NGO		
Project leader		JSI/WorldEd		
Report date and number		HYR2, October 31, 2024		
Project website/blog/social		https://worlded.org/project/women-led-school-based-		
media		agroforestry-project-in-benin/		
		https://www.darwininitiative.org.uk/news/2024/09/03/citizen-		
		science-to-build-climate-resilience/		
1. Outline progres	s over the	last 6 months (April – September) against the agreed		
project implement	ation timet	able (if your project started less than 6 months ago, please		
report on the period	od since st	art up to end of September).		
In the past six mont	ths, WSAB	made significant progress in promoting community-led		
biodiversity conservation, establishing and planting agroforestry plots, and advancing the AME-				
led microenterprise	s. All planne	ed activities for this period were successfully completed.		
Activity	Status			
Output 1: Commu	nities enga	ged		
1.1-1.4 Complete	Complete.			
Output 2: AMEs es	stablished	and/or strengthened		
2.1-2.3 Complete Complete.				
Output 3: AMEs are trained and supported to manage microenterprises based on				
school-based agro	oforestry in	itiatives together with teachers and community farmers		
3.1-3.6	Complete.			
3.7 Support AMEs	After entrep	reneurship development and trainings, which started in Y1 and		
to develop	were finaliz	ed in early Y2, during this reporting period, WSAB assisted the		
microbusinesses	three AMEs	in developing their micro-enterprises and business plans. They		
and business	assessed fi	nancial needs, projected income, and profitability, clarifying		
plans	community budgets and facilitating financial support. The AMEs focused			
	their initial business plans on agricultural crops, including maize, sovbeans,			
	and various	vegetables. Wereke expects revenue of 1,300,000 FCFA with a		
	profit of 600	0,000 FCFA; Sonnoumon anticipates 1,200,000 FCFA in		
	revenue an	d over 500,000 FCFA in profit; and Pouraparé aims for		
	1,500,000 F	CFA in revenue with a profit of nearly 900,000 FCFA. In future		
	years, the b	usiness plans will shift from agriculture-to agroforestry-based,		
	as the agro	forestry systems mature. It will be crucial to continue		
	communica	ting this shift away from <i>primarily</i> crops (maize, soya), and away		
	from using	organic pest repellents. Once matured, agroforestry systems will		
	replicate ec	osystem services, such as pest regulation, and generate new		
	produce (fru	uits, tree products, etc.) for future phases of the businesses.		
3.8 Provide seed	After develo	pping the business plans, WSAB provided funds to start		
funds to AMES to	operations, along with a borehole and fencing materials for security			
launch businesses	perimeters	around each of the three AMEs. This support facilitated the		
	launch of th	e enterprises. WSAB deposited funds into AME bank accounts.		

## Submission Deadline: 31<sup>st</sup> October 2024

Biodiversity Challenge Funds Half Year Report Template 2024

3.9 Provide	WSAB provided advisory support to AMEs on their income-generating		
guidance and	activities and created agreements to define resource distribution from their		
follow-up support	operations. WSAB also offered initial guidance during the launch and		
to AMEs	initiated weekly formative supervision to ensure ongoing support.		
3.10 Provide	The WSAB team carried out a mid-term analysis to assess each		
collaborative, mid-	community's progress and support with challenges they identified as		
term review on	hindering their success, followed by an exchange visit with AME members		
business plans	who presented their opportunities, challenges, and strategies for success in		
and provide	their micro-enterprises. Challenges included member engagement, access		
support	to vegetable seeds, and effective weed identification/management. WSAB		
	provided guidance around the importance of teamwork, identifying reliable		
	seed suppliers, and weeding methods avoiding the use of herbicides.		
Output 4: Agrofor	restry systems are planned and established in schools		
4.1-4.4	Complete.		
4.5 Build tree	The WSAB team trained participants on constructing and organising		
nurseries in	nursery areas, the components of growing media, potting techniques,		
schools	germination methods, and essential maintenance practices. WSAB then		
	assisted communities in gathering materials and establishing nurseries.		
4.6 Procure and	Following species identification through the DPC and BioBlitz (Y1), WSAB		
propagate	collaborated with communities to identify various native and fruit tree		
seedlings for	species for the agroforestry system. The team propagated native species,		
agroforestry	sourced through seed collection in the wild and through collaboration with		
systems	the local government. Species include Parkia biglobosa, Vitex doniana,		
	Vitellaria paradoxa, Blighia sapida, Diospyros mespiliformis, and		
	Tamarindus indica. Through AMEs, WSAB supported communities to		
	source fruit tree species such as guava, mango, orange, papaya, and		
	moringa. Locating native seedlings proved challenging. Establishing native		
	tree nurseries offers a promising income-generating opportunity that the		
·	WSAB team plans to explore with the AMEs.

The curriculum is rooted in local knowledge and context and aligns		

5.3 Support AMEs to ensure agroforestry activities provide hands-on learning 5.4 AMEs to liaise	of curriculum and teacher training (INFRE, the National Institute for Research in Education). The curriculum will be delivered by community representatives in the local language (A5.1), and by instructors in French (A5.2). This bilingual approach is proven to maximise engagement and understanding of the content. WSAB will use the agroforestry plots and local landscapes (native forest, fallow, monoculture, etc.) as hands-on learning opportunities to further connect learners with the content (A5.3). WSAB will support AMEs to liaise with school management to ensure				
with school	school canteens benefit from and take advantage from increased and				
management to	diversified crops. WSAB worked with AMEs to determine a potential				
ensure canteens	distribution of agroforestry / kitchen garden products, which includes a				
benefit from crops	portion designated for school canteens, a portion to support the AMEs				
	themselves, and a final portion for the individ	dual women involved.			
5.5 AME-hosted	WSAB held community planting days in each community and has broade				
agroforestry days	education days planned in the coming period	d (see Activity 4.7).			
2. Give details of any notable problems or unexpected developments/lessons learnt that					
the project has ei	at and whother the abangos will affect the	h what impact these could			
nave on the proje	ct and whether the changes will affect the	budget and timetable of			
WSAB faces two n	agin challenges: erratic climate conditions an	d animal straving/ trampling/			
trespassing. This season, rainfall has been irregular, starting late and resulting in dry pockets					
that have caused plant wilting and decreased seed viability. WSAP has needed to replant					
plants multiple times. While this does affect project timelines, ultimately, agroforestry is a					
methodology that i	ncreases crop resilience to erratic climactic p	atterns. Attempts to address			
animal straying / tr	ampling through low-cost methods (such as o	owner awareness and signage)			
have not been suc	cessful. Consequently, the local managemen	t associations hired a guard for			
the agroforestry sit	e, which has increased their financial burden	with only mixed results. While			
many community r	nembers have suggested installing a wire fer	ce, this requires significant			
funding which is ul	timately unsustainable. The project is exploring	ng natural fence solutions.			
3. Have any of the	ese issues been discussed with NIRAS an	d if so, have changes been			
made to the origi	nal agreement?				
Discussed with NI	RAS:	Yes/ <u>No</u> - not extreme enough			
Formal Change Re	equest submitted:	Yes/ <u>No</u> - N/A			
Received confirmation	tion of change acceptance:	Yes/ <u>No</u> - N/A			
Change Request r	eference if known: N/A				
4a. Please confirm your actual spend in this financial year to date (i.e. from 1 April 2024         - 30 September 2024)         Actual spend: £         (provisionary)					
4b. Do you currently expect to have any significant (e.g. more than £5.000) underspend					
in your budget for this financial year (ending 31 March 2025)?					
Yes D No X Estimated underspend: £					
4c. If you expect and underspend, then you should consider your project budget needs					
carefully. No underspend is expected, however should it be deemed justifiable, we will send a					
re-budget request to Defra via the official channels.					
5. Are there any other issues you wish to raise relating to the project or to BCF					
management, monitoring, or financial procedures?					
N/A					
6. Please use this section to respond to any feedback provided when your project was					
Please find attached as annexes the following documents requested in the annual report:					
Annex 1: Updated timeline					
<ul> <li>Annex 2: PCD tool/summary report (A1.1) and community action plans (A1.4)</li> </ul>
